Teradata, Oracle, Google Cloud Platform/BigQuery

Data Tools/Visualizations:

Tableau, DataWrapper, ThoughtSpot, Streamlit, Looker Studio

Python Libraries:	TensorFlow, Sklearn/Sci-kit-learn, PyTorch, Pandas, Numpy, Keras, Streamlit, LangChain, NewsAPI
GenAI/LLM:	Anthropic Claude, Google Gemini, OpenAI ChatGPT
Analysis Skills:	Machine Learning, RandomForests, Gradient Boosting, XGBoost, Neural Networks, Clustering Analysis, Linear Regression, Logistic Regression

Projects, Development, and Research (Detailed)

VCG Involuntary Churn & Bad Debt Master Dashboard

Verizon | 2025/2026

Development and automated deployment of executive-level dashboard for involuntary disconnects, churn, and subscribers for the Verizon Consumer Group, utilizing Knime, Python, SQL, Gemini, and Looker Studio.

Bad Debt Master Package Analysis & Commentary Generation

Verizon | 2025

Utilizing Google Gemini with a cross-team collaboration with Verizon's AI&D/VEGAS teams, developed and productionalized a prompt to conduct multivariate analysis on multiple large datasets and generate month-close reporting commentary for M/M, Q/Q, and Y/Y analysis.

Monthly Write Offs & Loan Loss Rate Report

Verizon | 2025

Development of a report dashboard showing in-month device payment loan write offs for bad debt loans and both the in-month and cohort-level loan loss rate, outstanding loan portfolio, and total loan volumes for the Verizon Consumer and Business Groups.

VCG Involuntary Churn & Bad Debt Master Package

Verizon | 2024

With cross-team collaboration, I participated in the development of a new executive-level analysis and report of Verizon's Consumer Involuntary Churn and Bad Debt. My direct contributions were exploratory data analysis across multiple databases and their datasets, their subsequent aggregation, and export for consolidation. This process was completed using SQL, Python, KNIME, Teradata, Oracle, and Google's G-Suite.

Verizon VCG Indirect Commissions by Master Agent ID

Verizon | 2024

Executive-level reporting and analysis of indirect agent commissions payout and device volumes utilizing Oracle, KNIME, Python, and Google Workspace

FinPulse: AI-Driven Finance

University of Central Florida | 2023

Graduate capstone project utilizing machine learning regression and time series models to forecast weekly sales using historic sales data and economic data/indicators to project sales and then presented via a stable Python GUI.

Comparative Study of NLP Machine Learning Models for Sentiment Analysis of Financial Consumer Complaints

University of Central Florida | 2023

Graduate-level thesis developing a Machine Learning AI model to analyze the sentiment of consumer complaints in the Consumer Financial Protection Bureau (CFPB) database to accurately predict the sentiment and severity of consumer complaints

Blockchain and Non-Fungible Tokens (NFT s) in Digital Government: An Exploration of the Digital World

University of Central Florida | 2023

Graduate-level literature review of Digital Governance and Blockchain/NFT s

Verizon Retail Refunds Reconciliation Script

Verizon | 2023

Development of Python script to automate the reconciliation of multi-thousand records of retail customer refunds saving dozens of hours of labor per month.

VZBAM Emittance Balancing Automation

Verizon | 2022

Development of Python script to automate the reconciliation of emittance records within the Verizon VZBAM system, saving 8 400 labor hours a year previously dedicated to manual reconciliation of the process
